

Project Title : Employee Rewards And Recognition

Business Requirements:

❖ Functional Requiriements

- **Employee Data Object Management**
 - Creation of custom Object to store employee records
 - It includes Fields like Employee Name, ID, Attendance, Performance etc.
- **Top Performer Identification**
 - The System has to Identify the top 4-5 employees who are at the top based on the criteria.
- **Automated Reward Evaluation**
 - Rewards Should be awarded to the employee based on their performance automatically for every 6 months.
- **Email Notification**
 - After the evaluation of the reward the email has to be sent to the selected top performers which contain reward type.

❖ Non – Functional Requirements

- **Security**
 - Only authorized admins should be able to modify and access the reward assignment.
 - Use Profiles to control access.
- **Scalability**
 - It must be capable of handling a growing number of employee records.

Step 1: Creating App

Switch to Salesforce Classic

Setup > Build > Create > Apps > Quick Start

Create Employee Recognition Tracker app

Add the Following tabs to Selected Tabs

- Home
- Employees
- Dashboards
- Reports

Default landing tab : Dashboard

Save

Switch to Lightning

Setup > App Manager > Apps > Employee Recognition Tracker > Edit

Check Show in Lightning

Save

Step 2 : Profiles Creation

Create profile

Setup > Quick Find > Profiles

Create New Profile

Existing Profile : Standard user

Profile Name : HR Manager

The screenshot shows the Salesforce 'Profiles' setup page. The 'HR Manager' profile is selected, and its permissions are listed. Below the permissions, there is a 'Profile Detail' section with a table showing the profile's name, user license, and description. The table indicates that the profile is a 'Custom Profile'.

Profile Detail	
Name	HR Manager
User License	Salesforce
Description	

Create user

Create new user and assign Profile HR Manager

Step 3 : Create Object and Add fields

Setup → Object Manager → Create → Custom Object

- Fill in Label & Plural Label

- Enable all optional features, search status, and object creation options

- Click Save

Setup → Object Manager → Create → Custom Object → Fill Label & Plural Label → Click all Optional Features, Search Status & Object Creation Options and then Save

The screenshot shows the Salesforce Setup interface for creating a custom object. The breadcrumb trail is Setup > OBJECT MANAGER. The page title is 'Employee Data'. On the left, a sidebar lists various configuration options: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, and Restriction Rules. The main content area is titled 'Edit Custom Object Employee Data' and contains the 'Custom Object Definition Edit' form. This form includes sections for 'Custom Object Information' (with fields for Label 'Employee Data', Plural Label 'data', and Object Name 'Employee_Data'), a description field, and 'Context Sensitive Help Setting' options. At the bottom, there are 'Save', 'Save & New', and 'Cancel' buttons.

The screenshot shows the 'New Custom Object' configuration page in Salesforce Setup. The page is divided into several sections: 'Optional Features' (with checkboxes for Allow Reports, Allow Activities, Track Field History, Allow in Chatter Groups, and Enable Licensing), 'Object Classification' (with checkboxes for Allow Sharing, Allow Bulk API Access, and Allow Streaming API Access), 'Deployment Status' (with radio buttons for In Development and Deployed), 'Search Status' (with a checkbox for Allow Search), and 'Object Creation Options' (with checkboxes for Add Notes and Attachments related list and Launch New Custom Tab Wizard). At the bottom, there are 'Save', 'Save & New', and 'Cancel' buttons.

Fields and relationships----->New----->datatype related to field required----->next

SETUP > OBJECT MANAGER

Step 3 : Flows

Creating Schedule Trigger Flow

Setup ? quick find ? flows ? new flow ? schedule trigger flow

Start Date : Jan

Time : 12:00 AM

Frequency : Once

Create new resource

Resource Type : Formula

API_Name : Is_Jan

Data Type : Boolean

Formula : $\text{Month}(\text{TODAY}()) = 1 \ \&\& \ \text{DAY}(\text{TODAY}()) = 1$

Edit Formula

* API Name ⓘ
Is_Jan

Description

* Data Type ⓘ
Boolean

* Formula

Month(TODAY()) = 1 && DAY(TODAY()) = 1

Same for Is_July And for Is_Today In Place of Formula Enter TRUE

Click on Plus After Start and Select Decision

Check Valid Run Date

Label : Check Valid Run Date

API Name : Auto Filled

Out Come Details :

Label : Is_Jan or July

Condition Requirements to Execute Outcome : Custom Condition Logic Is Met

Condition Logic : 1 OR 2 OR 3

Resource : Is_Jan

Operator : Equals

Value : True

Same for is_july and IS_today

The screenshot shows the configuration for a 'Check Valid Run Date' decision node. The main canvas on the left displays a workflow starting with a 'Start' node (labeled 'Wed, Jan 1, 2025, 12:00:00 AM, Daily') followed by the 'Check Valid Run Date' decision node. The right-hand panel provides the configuration details for this decision:

- Label:** Check Valid Run Date
- API Name:** Check_Valid_Run_Date
- Description:** (Empty text area)
- Outcomes:** For each path the flow can take, create an outcome. For each outcome, specify the conditions that must be met for the flow to take that path.
- OUTCOME ORDER:** A list containing 'Is Jan or Jul'.
- Default Outcome:** (Empty text area)
- OUTCOME DETAILS:**
 - *Label:** Is Jan or Jul
 - *Outcome API Name:** Is_Jan_or_Jul
 - Condition Requirements to Execute Outcome:** Custom Condition Logic Is Met
 - *Condition Logic:** 1 OR 2 OR 3
 - Logic Rules:**
 - 1:** Resource: Is_Jan, Operator: Equals, Value: True
 - 2:** Resource: Is_Jul, Operator: Equals, Value: True

Click on plus afer Is_Jan or July

Get Qualified Employees

Label : Get Qualified Employees

Object : Employee Data

Filter Conditions : All Conditions Are Met

- Field : Attendance Percentage

Operator : Greater Than

Value : 90

- Field : Performance Based Score
Operator : Greater Than
Value : 0.9
- Field : Task Completion Percentage
Operator : Greater Than
Value : 90

Sorted Order: Descending

How Many Records to Store: All, Records Up to a Specified Limit

Max Number : 4

How to Store Record Data : Automatically Store All Fields

Click on Plus Below Get Qualified Employee and Select Loop

Loop through top 5

Label : Loop Through Top 5

Collection Variable : Data from qualified Employee

Direction : First item to Last item

Click on plus below the for each and Click Assignment

Assign Reward Counter To Employee

Label : Assign Reward Counter to Employee

- Variable : Loop through top 5 > Top 5 Performer

Operator : Equals

Value : True

- Variable : Loop Through Top 5 > Rank

Operator : Equals

Value : Reward Counter

Click plus after assign reward counter to employee and click on decision

Decide reward based on rank

Label : Decide Reward Based on Rank

Out come Details :

Label : Rank 1

Resource : Reward Counter

Operator : equals

Value : 1

Do same for Rank 2, 3, 4 and click on plus symbol after that and click assignment

Label : Vacation

Set Variable Values >

Variable : Loop Through Top 5 > Rank

Operator : Equals

Value : Vacation

Do the same and assign rewards for each path of Ranks 1, 2, 3, 4

Rank 1 : vacation

Rank 2 : Hike

Rank 3 : Bonus

Rank 4 : Coupons

Increment Reward Counter

Label : Increment Reward Counter

Variable : Reward Counter

Operator : And

Value : 1

Click plus after increment reward counter and select action

Send Reward Email

Label : Send reward Email

Recipient Address list:

CC Recipient Address List:

Sender Type: CurrentUser

Step 4 : Reports & Dashboards

Creating Reports

For the sample data we have used a .csv file having the fields required.

A	B	C	D	E	F	G	H	I	J	K
Employee	Full Name	Department	Role	Number of	Number of	Total Num	Number of	Email		
E0001	John Holt	Finance	Financial Analyst	35	13	90	73	john.holt@example.com

Run Insert

Reports Creation for dashboards

App Launcher > Reports

Create New Folder

Label : Employee Recognition Reports

Click New Report

Select Employee Objects

Create These 3 Reports

Recognized Employees

Columns : Employee name, Department, Performance Score, Reward Type, Rank

Filters :

- Attendance Percentage > 90
- Performance Score > 0.9
- Tasks Completion percentage > 90
- Top Performer = true

Save

- In the same way Create the other 2 reports
- Top Performer Count by Department
- Attendance Vs Task Completion

Dashboard Creation

New Folder: Employee Recognition Dashboard

Add 3 Reports

Adjust the positions

Click Save.

Step 6: Dashboard Access Configuration

Configuring Dashboard Access

Select Dropdown aside Employee Recognition folder in Dashboards where Dashboard is Present

And click share

Select Users Under Share With

Under Names

Select each user and edit access and click share

User (System Administrator) - Manage Access

User (HR Manager) – Manage Access

Rest of Users – View Access

Done

Tools & Features Used

Tool / Feature	Purpose
Object Manager	Created custom objects and fields
Profiles	Controlled user access using custom profiles
Flows (Process Automation)	Automated report generation and sent reward emails to top performer
Reports & Dashboards	Visualized performance data such as top performers

Testing Results

Test Case	Test Description	Input / Setup	Expected Result	Actual Result	Status
TC_01	Custom Object & Creation	Employee data with required fields	All fields created and visible in the object	Successfully created all fields	Passed
TC_02	Filter Qualified Employees	Records with performance criteria	Only eligible employees fetched	Correct eligible list	Passed
TC_03	Email Sent to Winners	Flow triggered after reward assignment	Emails sent to top 4 performers	All 4 emails successfully received	Passed

Test Environment

- **Salesforce Org Type:** Developer Edition
- **Data Used:** 50 sample records, 5 high performers
- **Test Tools:** Flow Debug, Email Log, Object Record View
